

## 02: How an Elusion Electronic Cigarette works

The Elusion Electronic Cigarette uses advanced microelectronic technology and essential physical atomization technology. This allows it to atomize the high-purity liquid dilution extracted from the cartridge.

The liquid dilution that we use contains several flavours such as standard, menthol and coffee. This gives you the effect of inhaling a cigarette, without the harmful health effects caused by nicotine.

## 03: Electronic Components

### General electronic components

Your Elusion Electronic Cigarette is a high-tech product. Its components - such as cartridges, battery and charger - are specially designed to fit the Elusion Electronic Cigarette.

This means that the use of any other electronic components is likely to lead to malfunction and damage to the product.
